

Plane

design Massimo Mariani

Table made of two tempered glass panels, 120x120cm with 12mm thick, with rounded corners and beveled edge. The lower glass panel has three through holes to house two pins to insert a slab of solid walnut or white Carrara marble. Both version are finished with a slip proof transparent matt varnish on the upper surface. The third hole houses another pin to support the upper glass panel, to which is fixed, with a UV-cured adhesive, a small plate with a conical counterbore to align it with the pin itself. Stainless steel AISI 304 feet fixed to the glass panel through a UV-cured adhesive, paired with black plastic tips.
